

High-Touch Intervention For Substantial Savings

A Case Study

Challenge

A food manufacturer faced unique challenges with its population. Its member population had an **identified prevalence of chronic kidney disease (CKD) risk** and consisted mostly of **Spanish-speaking** and **migrant members**.

12,000

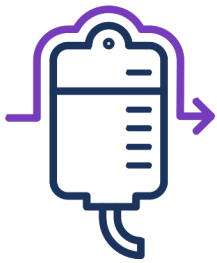

COVERED LIVES

These members struggled with both access to and navigation of healthcare resources, and because of their rural location, there was historically **high ER utilization** and **catastrophic claims** due to the lack of preventative care.

Solution

ImpactCare

The client turned to Renalogic's ImpactCare, which significantly **delays the progression of chronic kidney disease** and **reduces the subsequent health plan costs**.

In the early phases of the **ImpactCare** implementation, Renalogic registered nurses **traveled on-site to engage with members during their lunch breaks** and even outside of work at the local Walmart where employees frequented. Renalogic's **dedicated Spanish-speaking nurses continue to help members:**

- ✓ **Navigate their benefits and schedule appropriate condition care**
- ✓ **Use the benefits offered through their health plan and ImpactCare**
- ✓ **Understand the importance of preventative care for CKD and overall health**

Results

ER utilization rates decreased dramatically, and preventative care along with education **decreased members' progression to dialysis**.
